Two corrections to Monday

AmphibiaWeb's own guidelines and template are on the pod now (see the Canvas announcement for the `file.copy()` lines). Read them before your draft goes further. Two things I told you Monday were wrong:

1. **Distribution: no GBIF or VertNet.** AmphibiaWeb takes primary literature. The one secondary source they accept is your species' IUCN Red List page
2. **Calls: no team data.** Your team's measurements are unpublished, so they stay out of the account. Summarize a published call description and cite it, or say that none has been published

The Oct 14 draft date hasn't changed. The Monday deck and its PDF on the site are corrected.

Today

- **First 15 minutes:** stand-ups, team by team
- **The rest:** work. Start from the **“This week”** box at the top of your team’s roster, not from your proposal
- I’ll circulate. Flag anything in your roster’s **“Mine to unblock”** list that **I** haven’t gotten to yet

Specimen metadata for your team

One CSV per team is on the pod: each recorded male's field number, files, ambient temperature, mass, and SVL, as far as I have them.

```
file.copy("/stor/work/FRI_Bio206_TD_Spring2026/team3-specimen-metadata.csv", "~/")
```

Swap 3 for your team number.

- **Mass** is mostly there. **Temperature** is mostly not: Team 5 has none, Team 6 has three. Blank means missing, not zero
- Join on field number. Treat temperature as a covariate gap in your proposal, as before
- Some notebook temperatures are still to be recovered. If you know of one, tell me

Stand-up: three things, two minutes

One person per team, standing up, two minutes:

1. **What's measured:** files done, calls in `selections_*.csv`
2. **What's blocked:** and whether it's yours to work around or mine to unblock
3. **What you need from me**

Not a status report on every file. If it takes longer than two minutes, we talk after.

Before Monday

As a team

- [ ] Step 1 of your notebook filled in: who measures what, and your start/end rule written as a sentence
- [ ] The steward renders the notebook through Step 3 with at least one teammate's `selections_*.csv`

On your own

- [ ] AmphibiaWeb guidelines + template read
- [ ] Your species' original description found; its IUCN page checked

Monday Oct 5: reproducible workflows. Bring a notebook that renders.
